

Strategic Stock Management

SiPRO

The Strategic Stock Management tab allows users to manage products that require special stockholding treatment outside the normal replenishment proposal workflow.

This feature is designed for **exception-based** inventory decisions where a product must be handled differently due to customer requirements, business risk, lifecycle stage, operational importance, or temporary supply considerations.

Proposal Workflow Restriction

When a product has a Strategic Stock Type, proposal workflow actions in the Proposal Report are disabled for that product.

This is intentional. Strategic stock products are treated as exceptions and are not meant to be processed through the normal accept/apply proposal workflow.

Strategic Stock Management

To access this feature:

1. Open the Products menu in Odoo.
2. Select the required product.
3. Open the Strategic Stock Management tab.

This tab is available on the product form and is managed individually for each product.

Purpose of Strategic Stock Management

Strategic Stock Management is used when a product needs temporary or special stockholding rules that should **not be driven** only by the standard inventory proposal calculations.

Because these scenarios are product-specific, they are maintained directly on the product record rather than in the general settings page.

How Strategic Stock Management Works

Standard Flow

The typical process is:

1. Open the product.
2. Go to the Strategic Stock Management tab.
3. Select a Strategic Stock Type.
4. Enter the request details.
5. Enter the relevant customer details if needed.
6. Define the stock period and review dates.
7. Enter the target New Min and New Max values.
8. Save the product.

Once saved, the strategic stock data is recorded against the product, and the target reorder values are synced to the product's reordering rule.

Automatic Behavior

Reordering Rule Synchronization

When New Min and New Max are entered and saved, the module updates the product's reordering rule accordingly.

If no reordering rule exists, the module can create one for the product in the company warehouse context.

Proposal Workflow Restriction

When a product has a Strategic Stock Type, proposal workflow actions in the Proposal Report are disabled for that product.

This is intentional. Strategic stock products are treated as exceptions and are not meant to be processed through the normal accept/apply proposal workflow.

Automatic Reversion After End Date

The module includes a scheduled daily process that checks for expired strategic stock records.

When the strategic stock end date has passed, the system reverts the reordering rule.

In general:

- most strategic items revert to their stored post-end-date values
- Phased Out and Obsolete items revert to 0 / 0

The reversion is also logged for traceability.

Special Behavior by Stock Type

New Product Launch

For New Product Launch, the module automatically sets:

- Stock Start Date
- Stock End Date to six months after the start date

This supports a predefined launch stockholding period.

Seasonal, Promotion, Obsolete, and Phased Out

For these stock types:

- customer details are cleared
- estimated monthly consumption is reset
- target min/max values are expected to remain 0 / 0

For Obsolete and Phased Out, this helps reduce the risk of accidental reordering.

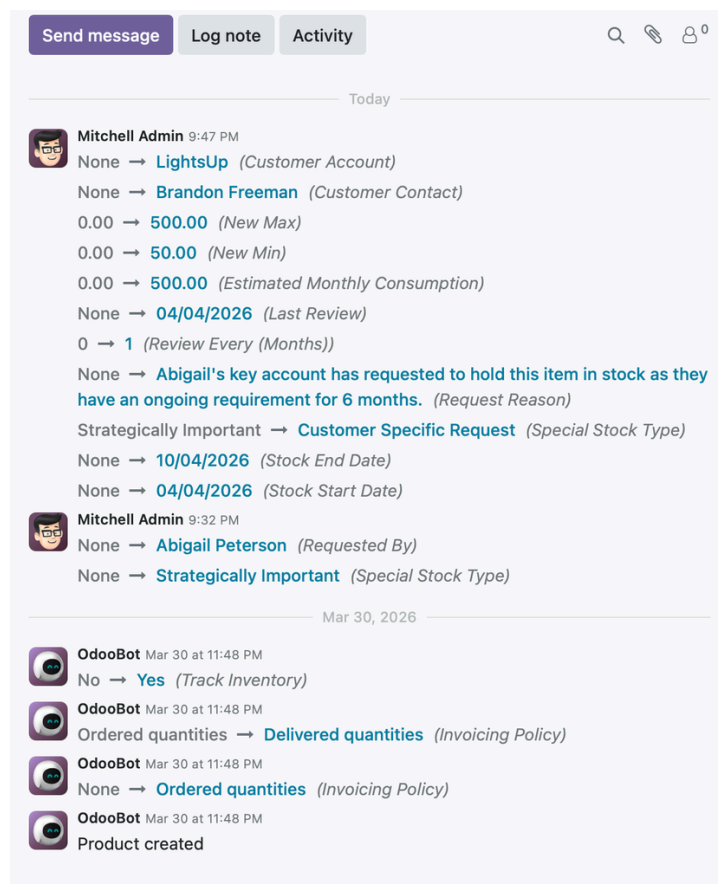

Validation Rules

The module includes several controls to protect data quality:

- Stock Start Date cannot be in the past
- New Min cannot be greater than New Max
- for Seasonal, Promotion, Obsolete, and Phased Out, target min/max must remain zero

These validations help ensure strategic stock is managed consistently and safely.

Strategic Stock Log

Every important strategic stock change will be recorded in the Strategic Stock Log.

This log provides historical visibility of:

- strategic stock type
- request information
- target min/max values
- original values
- stockholding period
- costs
- reversion activity

This gives users an audit trail for strategic inventory decisions.

Recommendation

- Use Strategic Stock Management only for exception-based stock decisions.
- Do not use it as a substitute for normal replenishment planning.
- Record a clear request reason for auditability.
- Maintain realistic end dates and review periods.
- Use customer association fields only when the stock is linked to a specific customer requirement.
- Review phased-out and obsolete items carefully to avoid unnecessary stockholding.
- Check the Strategic Stock Log regularly if multiple users maintain these records.

The Strategic Stock Management tab gives users a controlled way to manage products that require temporary, special, or business-critical stockholding treatment.

It helps ensure that exceptional stock decisions are:

- documented
- traceable
- linked to reorder rules
- reviewed over time
- automatically reverted when no longer required

Fields include:

- Strategic Stock Type
- Requested By
- Request Date
- Request Reason

Strategic Stock Type

This is the main control field in the tab.

Available types include:

- Strategically Important
- Customer Specific Request
- Production Material
- MRO Parts
- Seasonal
- Promotion
- Product Lifecycle Management – New Product Launch
- Product Lifecycle Management – Phased Out
- Product Lifecycle Management – Obsolete
- Other

This field determines how the product is treated in the strategic stock process.

Requested By

Records the employee responsible for initiating the strategic stock request.

Request Date

Stores the date the request was created.

Request Reason

Allows users to document the reason for holding or managing this product as strategic stock.

2. Customer Association

This section is used when the stockholding requirement is linked to a customer.

CUSTOMER ASSOCIATION

Customer Account [?] LightsUp

Customer Contact [?] Brandon Freeman

Fields include:

- Customer Account
- Customer Contact

Use this area for customer-specific stock requests or where stock is being held in support of a known account or contact.

3. Consumption Estimate

CONSUMPTION ESTIMATE

Estimated Monthly Consumption [?] 500.00

This section includes:

- Estimated Monthly Consumption

This value allows the user to enter an expected monthly usage figure for the product in the context of the strategic stock decision.

4. Stock Holding Period

This section controls the time period for which the strategic stock arrangement should remain active.

STOCK HOLDING PERIOD

Stock Start Date [?]	Apr 4
Stock End Date [?]	Oct 4
Review Every (Months) [?]	1
Last Review [?]	Apr 4
Next Review [?]	May 4

Fields include:

- Stock Start Date
- Stock End Date
- Review Every (Months)
- Last Review
- Next Review

Stock Start Date

The date from which the strategic stock period begins.

Stock End Date

The planned end date for the strategic stock arrangement.

Review Every (Months)

Defines how often the stock strategy should be reviewed.

Last Review

Records the last review date.

Next Review

This field is calculated automatically based on the review interval and last review date.

5. Reordering Overview

This section gives visibility into the product’s current reorder values and stock position.

REORDERING OVERVIEW

Reordering Rules

Current Min [?]	50.00
Cost (\$) of Current Min	\$ 6,025.00
Current Max [?]	500.00
Cost (\$) of Current Max	\$ 60,250.00
Stock On Hand [?]	33.00
Cost (\$) of Stock On Hand	\$ 3,976.50

Fields include:

- Current Min
- Current Max
- Stock On Hand
- related cost values for each

This helps users compare the current reorder rule against the proposed strategic stock targets.

A Reordering Rules button is also available to open the linked Odoo reordering rule directly.

6. Target Min/Max Quantities

This section contains the key fields used to define the temporary strategic stock target.

TARGET MIN/MAX QUANTITIES

New Min [?]	50.00
Cost (\$) of New Min	\$ 6,025.00
New Max [?]	500.00
Cost (\$) of New Max	\$ 60,250.00

Fields include:

- New Min
- New Max

These values represent the target stock levels to be used during the strategic stock period.

When maintained, the module synchronizes these values with the product’s reordering rule.

7. Post End Date Quantities

This section displays the quantities that will apply after the strategic stock period ends. The values are read-only and cannot be overridden by the user.

POST END DATE QUANTITIES

Post End Date Min [?]	0.00
Post End Date Max [?]	0.00
Last Reverted Date [?]	

Fields include:

- Post End Date Min
- Post End Date Max
- Last Reverted Date

These values allow the system to restore or reset reorder values when the strategic stock period expires and displayed help user review re-ordering rules.

Post End Date Quantities

Phased Out and Obsolete items always revert to 0 / 0, even if a product previous had non-zero re ordering rule.
